HTML attribute reference Elements in HTML have attributes; these are additional values that configure the elements or adjust their behavior in various ways to meet the criteria the users want. Global attributes Global attributes are attributes common to all HTML elements; they can be used on all elements, though they may have no

effect on some elements. Content categories Every HTML element is a member of one or more content categories — these categories group elements that share common characteristics. HTML comments HTML comments are used to add explanatory notes to the markup or to prevent the browser from interpreting specific parts of the document. Date and time formats used in HTML Certain HTML elements allow you to specify dates and/or times as the value or as the value of an attribute. These include the date and time variations of the `<input>` element as well as the `<ins>` and `<del>` elements.

Learn Next.js | Next.js by Vercel - The React Framework

<https://nextjs.org/learn>

Next.js by Vercel is the full-stack React framework for the web.

CONTENTS OVERVIEW

- Start building with Next.js
- How does the course work?
- What will I learn?

PAGE CONTENT

Skip to contentSearch documentation...Search...# KShowcaseDocsBlogTemplatesEnterpriseSearch documentation...Search...# KDeployLearnStart building with Next.jsGo from beginner to expert by learning the foundations of Next.js and building a fully functional demo website that uses all the latest features.Learn Next.jsLearn Next.js16 chapters that take you from React to Next.js.PlaceholderReact FoundationsNew to React? Learn the foundational concepts to help you go from JavaScript to React.StartNext.js Pages RouterLearn how to build a static blog with the Pages Router.StartHow does the course work?By building a full web application. Step by step.Set up your local environment and initializing the "ACME" Next.js project template.Use pre-styled components as part of each chapter that leverage Next.js conventions and patterns.Hook up real application logic and data to bring a fully-fledged demo website to life.At the end you'll have a website that's ready to ship and the knowledge to build and deploy your own.Your progress will be synced as you complete chaptersGo at your own pace and pick up where you left offTest your knowledge during each chapterTake quick quizzes to see what you've learnedWhat will I learn?Here's everything that's covered in the course.IntroductionLearn how to build a full-stack web application with the free, Next.js Foundations course.1Getting StartedCreate a new Next.js application using the dashboard starter example and explore the project.2CSS StylingStyle your Next.js application with Tailwind and CSS modules.3Optimizing Fonts and ImagesOptimize fonts and images with the Next.js built-in components.4Creating Layouts and PagesCreate the dashboard routes and a shared layout that can be shared between multiple pages.5Navigating Between PagesLearn how to use the `<Link>` component to navigate between pages.6Setting Up Your DatabaseSetup a database for your application and seed it with initial data.7Fetching DataLearn about the different ways to fetch data in Next.js, and fetch data for your dashboard page using Server Components.8Static and Dynamic RenderingUnderstand how rendering works in Next.js, and make your dashboard app dynamic.9StreamingImprove your application's loading experience with streaming and loading skeletons.10Adding Search and PaginationAdd search and pagination to your dashboard application using Next.js APIs.11Mutating DataMutate data using React Server Actions, and revalidate the Next.js cache.12Handling ErrorsHandle errors gracefully with `error.tsx` and `notFound`.13Improving

AccessibilityImplement server-side form validation and improve accessibility in your forms.14Adding AuthenticationAdd authentication to protect your dashboard routes using NextAuth.js, Server Actions, and Proxy.15Adding MetadataLearn how to add metadata to your Next.js application.16Next StepsNext.js Dashboard Course ConclusionPlaceholderLooking to go deeper?Continue learning by using our guides.View All GuidesHow to build a fullstack app with Next.js, Prisma and PostgresBuild, Deployment & GitBuild a multi-tenant app with custom domains using Next.jsBuild, Deployment & GitIntegrating Next.js and Contentful for your headless CMSDatabases & CMSBuilding Ecommerce Sites with Next.js and ShopifyDatabases & CMSUsing headless WordPress with Next.js and VercelDatabases & CMSNext.js DocumentationThe complete resource for installing, running, building with, and deploying Next.jsView the DocumentationResourcesDocsSupport PolicyLearnShowcaseBlogTeamAnalyticsNext.js ConfPreviewsEvalsMoreNext.js CommerceContact SalesCommunityGitHubReleasesTelemetryGovernanceEcosystem Working GroupAbout VercelNext.js + VercelOpen Source SoftwareGitHubBlueskyXLegalPrivacy PolicyCookie PreferencesSubscribe to our newsletterStay updated on new releases and features, guides, and case studies.Subscribe© 2026 Vercel, Inc.PlaceholderPlaceholder

TypeScript: Documentation - TypeScript 6.0

<https://www.typescriptlang.org/docs/handbook/release-notes/typescript-6-0.html>

TypeScript 6.0 Release Notes

CONTENTS OVERVIEW

- TypeScript 6.0
- Less Context-Sensitivity on this-less Functions
- Subpath Imports Starting with #/
- Combining --moduleResolution bundler with --module commonjs
- The --stableTypeOrdering Flag
- es2025 option for target and lib
- New Types for Temporal
- New Types for “upsert” Methods (a.k.a. getOrInsert)
- RegExp.escape
- The dom lib Now Contains dom.iterable and dom.asynciterable
- Breaking Changes and Deprecations in TypeScript 6.0
- Preparing for TypeScript 7.0

FunctionGlobal .d.tsGlobal: Modifying ModuleDo's and Don'tsDeep DivePublishingConsumptionJavaScriptJS Projects Utilizing TypeScriptType Checking JavaScript FilesJSDoc ReferenceCreating .d.ts Files from .js filesProject ConfigurationWhat is a tsconfig.jsonCompiler Options in MSBuildTSConfig Referencetsc CLI OptionsProject ReferencesIntegrating with Build ToolsConfiguring WatchNightly BuildsTypeScript 6.0Less Context-Sensitivity on this-less Functions When parameters don't have explicit types written out, TypeScript can usually infer them based on an expected type, or even through other arguments in the same function call. `tsdeclare function callIt<T>(obj: { produce: (x: number) => T, consume: (y: T) => void,}): void;// Works, no issues.callIt({ produce: (x: number) => x * 2, consume: y => y.toFixed(),});// Works, no issues even though the order of the properties is flipped.callIt({ consume: y => y.toFixed(), produce: (x: number) => x * 2,});` Here, TypeScript can infer the type of y in the consume function based on the inferred T from the produce function, regardless of the order of the properties. But what about if these functions were written using method syntax instead of arrow function syntax? `tsdeclare function callIt<T>(obj: { produce: (x: number) => T, consume: (y: T) => void,}): void;// Works fine, `x` is inferred to be a number.callIt({ produce(x: number) { return x * 2; }, consume(y) { return y.toFixed(); },});callIt({ consume(y) { return y.toFixed(); }, // ~ // error: 'y' is of type 'unknown'. produce(x: number) { return x * 2; },});` Strangely enough, the second call to callIt results in an error because TypeScript is not able to infer the type of y in the consume method. What's happening here is that when TypeScript is trying to find candidates for T, it will first skip over functions whose parameters don't have explicit types. It does this because certain functions may need the inferred type of T to be correctly checked - in our case, we need to know the type of T to analyze our consume function. These functions are called contextually sensitive functions - basically, functions that have parameters without explicit types. Eventually the type system will need to figure out types for these parameters - but this is a bit at odds with how inference works in generic functions because the two "pull" on types in different directions. `tsfunction callFunc<T>(callback: (x: T) => void, value: T) { return callback(value);}callFunc(x => x.toFixed(), 42);// ^// We need to figure out the type of `x` here,// but we also need to figure out the type of `T` to check the callback. To solve this, TypeScript skips over contextually sensitive functions during type argument inference, and instead checks and infers from other arguments first. If skipping over contextually sensitive functions doesn't work, inference just continues across any unchecked arguments, going left-to-right in the argument list. In the example immediately above, TypeScript will skip over the callback during inference for T, but will then look at the second argument, 42, and infer that T is number. Then, when it comes back to check the callback, it will have a contextual type of (x: number) => void, which allows it to infer that x is`

Home About Download Documentation Community Developers Support Donate Your account June 4, 2026: PostgreSQL 19 Beta 1 Released! Quick Links About Governance Policies Feature Matrix Donate History Sponsors Contributing Financial Servers Latest News Upcoming Events Past events Press Licence Donate This pages lists Recognised NPOs and additional non-profit organisations that are critical to the PostgreSQL project. Donations to these organizations are helpful in supporting our work. There are different ways to support Recognised NPOs, including becoming a Financial Sponsor. You can find out more information about financial sponsorship on the financial sponsorship page, or through a Recognised NPOs website. PostgreSQL Community Association The PostgreSQL Community Association (PGCA) is a special-purpose NPO setup at the request of the PostgreSQL Core Team to manage and protect key project assets such as domain names and trademarks. Donating to PGCA supports general project administrative efforts that come with maintaining an open source project. Donate to PostgreSQL PostgreSQL Europe (PGEU) PostgreSQL Europe is a European region non profit focusing on the support of other PostgreSQL groups in Europe. Donate to PGEU PostgreSQL United States (PgUS) PostgreSQL United States is a non profit for PostgreSQL in the United States. It focuses on Education, User Groups, and Advocacy. Donate to PgUS Other PostgreSQL efforts PostgreSQL is an affiliated project of Software in the Public Interest. Funds donated to PostgreSQL are used to sponsor general PostgreSQL efforts around the world. These funds are managed by the Funds Group. Donate to PG @ SPI Tax deductibility Please be aware that PostgreSQL contributions may or may not be tax exempt. For more information please refer to the party you are donating to and your tax professional. PostgreSQL Nonprofit Organisation (NPO) Recognition For information about how Recognised PostgreSQL Nonprofit Organisations (NPOs) become recognised, please review the guidelines here. Questions If you have any questions about donations please contact either the PostgreSQL Funds Group or the respective organisation you are donating to. Policies | Code of

Read moreIntroducing the React FoundationOctober 7, 2025Today, we're announcing our plans to create the React Foundation and a new technical governance structure ... Read moreReact 19.2October 1, 2025React 19.2 adds new features like Activity, React Performance Tracks, useEffectEvent, and more. In this post ... Read moreReact Labs: View Transitions, Activity, and moreApril 23, 2025In React Labs posts, we write about projects in active research and development. In this post, we're sharing two new experimental features

that are ready to try today, and sharing other areas we're working on now ...[Read more](#)

[Sunsetting Create React App](#)
February 14, 2025
Today, we're deprecating Create React App for new apps, and encouraging existing apps to migrate to a framework, or to migrate to a build tool like Vite, Parcel, or RSBUILD. We're also providing docs for when a framework isn't a good fit for your project, you want to build your own framework, or you just want to learn how React works by building a React app from scratch ...[Read more](#)

[React v19](#)
December 5, 2024
In the React 19 Upgrade Guide, we shared step-by-step instructions for upgrading your app to React 19. In this post, we'll give an overview of the new features in React 19, and how you can adopt them ...[Read more](#)

[React Compiler Beta Release](#)
October 21, 2024
We announced an experimental release of React Compiler at React Conf 2024. We've made a lot of progress since then, and in this post we want to share what's next for React Compiler ...[Read more](#)

[React Conf 2024 Recap](#)
May 22, 2024
Last week we hosted React Conf 2024, a two-day conference in Henderson, Nevada where 700+ attendees gathered in-person to discuss the latest in UI engineering. This was our first in-person conference since 2019, and we were thrilled to be able to bring the community together again ...[Read more](#)

[React 19 Upgrade Guide](#)
April 25, 2024
The improvements added to React 19 require some breaking changes, but we've worked to make the upgrade as smooth as possible, and we don't expect the changes to impact most apps. In this post, we will guide you through the steps for upgrading libraries to React 19 ...[Read more](#)

[React Labs: What We've Been Working On – February 2024](#)
February 15, 2024
In React Labs posts, we write about projects in active research and development. Since our last update, we've made significant progress on React Compiler, new features, and React 19, and we'd like to share what we learned.[Read more](#)

[React Canaries: Incremental Feature Rollout Outside Meta](#)
May 3, 2023
Traditionally, new React features used to only be available at Meta first, and land in the open source releases later. We'd like to offer the React community an option to adopt individual new features as soon as their design is close to final—similar to how Meta uses React internally. We are introducing a new officially supported Canary release channel. It lets curated setups like frameworks decouple adoption of individual React features from the React release schedule.[Read more](#)

[React Labs: What We've Been Working On – March 2023](#)
March 22, 2023
In React Labs posts, we write about projects in active research and development. Since our last update, we've made significant progress on React Server Components, Asset Loading, Optimizing Compiler, Offscreen Rendering, and Transition Tracing, and we'd like to share what we learned.[Read more](#)

[Introducing react.dev](#)
March 16, 2023
Today we are thrilled to launch react.dev, the new home for React and its documentation. In this post, we would like to give you a tour of the new site.[Read more](#)
